Tanium API Updates
January 2026

~ Announcements & Events ~

Deprecation Policy Change
Deprecated fields in Tanium Gateway will now receive support and maintenance for a minimum of **12 months** from the initial deprecation announcement.

~ What's New? ~

Tanium Gateway GraphQL

- The **discoverLabels** and **discoverLabel** queries now return interface counts for each category of interface in the interfaceCounts field. This capability is available at an Experimental stability level.
- **Automate**
  - These capabilities are available at an Experimental stability level.
  - The **filter argument** to the **playbookRuns query** has been expanded to allow filtering for playbook runs by start time range using the **startBeforeTime** and **startAfterTime** fields.
  - You can now override the default and specify which email server to use for playbook notifications. Use the **input.notificationSettings.email.server.id** field when you create or update a playbook with the **playbookUpsert** mutation.
  - When adding a playbook step to create a patch deployment, you can now provide end users the option to start the deployment before the scheduled start time through the Self Service client application. Use the **input.steps.taskArgument.patchInstallDeployment.patchDeploymentConfig.eussAvailableBeforeStart** field when you create or update a playbook with the **playbookUpsert** mutation. You can also override this option on a particular playbook run with the **input.stepOverrides.taskArgument.patchInstallDeployment.patchDeploymentConfig.eussAvailableBeforeStart** field passed to the **playbookStart** mutation.
- The **EndpointComplianceCveFinding** object has been significantly expanded to provide additional information about exploit intelligence in CVEs. See the

object definition for the complete list. These new fields are available in the **endpoints** query in the **compliance.cveFindings** field at an Experimental stability level.

Module REST APIs

- **Tanium Enforce** will soon have an API available for Tanium Cloud customers. A draft version of the specification is available to browse at https://developer.tanium.com/apis/enforce/enforce
- **Tanium Deploy**
  - The **GET /plugin/products/deploy/v1/jobs/extended-information/{jobtype}** endpoint has been added to retrieve errors with software packages.

Tanium Connect

- The **Tanium Jump Gate Audit** and **Tanium Jump Gate Sessions** sources have been added to send data related to Tanium Jump Gate usage on Tanium Cloud.

~ Changes and Fixes ~

Sensors

- **BREAKING CHANGE** – The **SSL Server Audit solution** was deprecated in July, 2025. The **Core Content - SSL/TLS Server Audit sensors** are no longer installable but continue to be supported for customers who already have the SSL Server Audit solution. Replacement functionality is available as part of the Certificate Manager

solution. https://help.tanium.com/bundle/ug_certificate_manager_cloud/page/certificate_manager/ref_sensors.html

Tanium Connect

- **BREAKING CHANGE** – The **Email (SMTP)** destination is now deprecated and will be removed in a future release. Use the consolidated **Email (O365 & SMTP)**destination instead.

Tanium Gateway GraphQL

- **Automate Changes**
  - **BREAKING CHANGE** – The **nextRunTime field** in the **PlaybookSchedule** object has been deprecated and replaced with the **nextRunTimes** field, which returns multiple upcoming scheduled runs for a playbook rather than a single run. This object type is used to define a number of different fields and therefore impacts nearly every query and mutation in the Automate API.
- **Provision Changes**
  - **BREAKING CHANGE** – The **provisionCreateRetirementAction** mutation will soon always require the **targetEndpointParameters field** to be passed in. The**endpointID field** will also always need to be passed in unless the API token has the **'Provision Manual Retirement Actions' write** permission, in which case it can optionally be excluded. This capability is still at an Experimental stability level.

Module REST APIs

- **Deploy Changes**
  - The **overrideBlacklists** and **overrideMaintenanceWindows** options in the POST /plugin/products/deploy/v1/deployments endpoint now require the **patchDeploymentBlockListOverrideWrite** and **patchDeploymentMaintenanceWindowOverrideWrite** privileges, respectively. The existing privilege **patchDeploymentWrite** automatically inherits both of these privileges.
- **Comply Changes**

- The **MigrationTdsBackfillFailure** and **MissingAirgapJovalLicense** optio ns are now supported as values for the type parameter in the GET /v1/notifications/searchendpoint for Tanium Cloud.
- The **files.upload_id parameter** is no longer supported for the POST /v1/vulnerability-sources endpoint for Tanium Cloud. The parameter is ignored.
- The severity that is returned from the POST /v1/vulnerability/cves endpoint has been moved from the **items[].severity field** to the various CVSS scoring model fields under **items[].scores** for Tanium Cloud.
-  **BREAKING CHANGE** – The type for the **defaultEid** and **unmanagedEid i**nput fields for the POST /plugin/products/comply/v1/endpoint /satellites has been changed from integer to string for SAR 2025H2. It was changed previously for Tanium Cloud.

~ Deprecation Notices ~

Connect

- Feature removal in **December 2026** for Tanium Cloud and **SAR2026H2** for the following:
  - Email (SMTP) destination

Module REST APIs

- Support will end for the following endpoints:
  - GET /plugin/products/asset/v1/settings/{name}
  - PUT /plugin/products/asset//v1/settings/{name}
  - POST /plugin/products/comply/v1/exports/:assessmentHash

Tanium Gateway GraphQL

- Support ends **March 2027** for the following fields:
  - query.playbookRun.steps.progress.details.actionID
  - query.playbookRuns.edges.node.steps.progress.details.actionID
- Support ends **February 2027** for the following fields:
  - object.PlaybookSchedule.nextRunTime
- Support ends **December 2026** for the following behaviors:

    - EndpointSourceTDS Input allowing namespaces and allNamespaces fields to be included together
- Support ends **December 2026** for the following fields:
    - query.playbookRun.steps.confirmationResult
    - query.playbookRun.steps.progress
    - query.playbookRuns.edges.node.steps.confirmationResult
    - query.playbookRuns.edges.node.steps.progress
- Support ends **November 2026** for the following fields:
    - mutation.playbookUpsert.playbook.canRun
    - mutation.playbookStart.playbookRun.playbook.canRun
    - query.playbookRuns.edges.node.canRun
    - query.playbooks.edges.node.canRun
    - query.playbookSchedules.edges.node.playbook.canRun
    - mutation.playbookStart.playbookRun.steps.playbookStep.currentUserMissingPermissions
    - mutation.playbookUpsert.playbook.runs.edges.node.steps.playbookStep.currentUserMissingPermissions
    - query.playbookRuns.edges.node.steps.currentUserMissingPermissions
    - query.playbooks.edges.node.steps.currentUserMissingPermissions
    - query.playbookSchedules.edges.node.playbook.steps.currentUserMissingPermissions
- Support ends **June 2026** for the following fields:
    - mutation.assetsImport
- Support ends **March 2026** for the following fields:
    - mutation.deleteConfigurationItemElement
    - mutation.deleteRelationship
    - mutation.importConfigurationItemEntities
    - mutation.mergeConfigurationItemElements
    - mutation.syncAssets
    - mutation.updateConfigurationItemProperties
    - mutation.upsertRelationship
    - query.configurationItemEntities
    - query.configurationItemProperties
    - query.configurationItemRelationships
    - query.endpoints.edges.node.configurationItem
    - query.relationshipTypes

- Support has ended for the following deprecated fields, and they might be removed from a future release without additional notice:
  - **query.endpointLastSeen**
  - **query.endpoints.edges.node.software**
  - **query.directEndpoint.performance.memoryUsagePercent**
  - **query.lastActionDetails (id)**
  - **query.lastActionResults (id) · mutation.createAction (action: { }) · mutation.deleteAction (name)**
  - **query.assets · mutation.installSoftware · mutation.removeSoftware · mutation.upsertEntity · query.directConnection**
  - **query.endpoints.edges.node.diskSpace**
  - **query.endpoints.edges.node.memory.used**
  - **query.endpoints.edges.node.memory.usedPercentage**
  - **mutation.closeDirectConnection**
  - **mutation.killProcess · mutation.openDirectConnection**
  - **mutation.pingDirectConnection**
  - **query.directEndpoint**
  - **query.endpoints.edges.node.risk**
  - **query.endpoints.edges.node.risk.assetCriticality**
  - **query.endpoints.edges.node.risk.criticalityScore**
  - **query.endpoints.edges.node.risk.riskLevel**
  - **query.endpoints.edges.node.risk.totalScores**
  - **query.endpoints.edges.node.risk.vectors**
