Tanium API Updates
June 2026

~ Upcoming Events ~

Developer Summit at Converge 2026 in Las Vegas

We are excited to announce that the Tanium Developer Summit will be returning as a Live and In-Person event at Converge! It will be held on Thursday morning, November 19th. Details will be announced soon. Connect with us at developersummit@tanium.com with any questions about sponsoring or attending.

~ What's New? ~

Tanium Gateway GraphQL

- **Automate**
  - The results from a ringDeployments query can be narrowed down with the new RingDeploymentFieldFilter.startAfterTime filter. It is an inclusive lower bound on the ring deployment start time that matches ring deployments started on or after the supplied time.
- **Connect Enrichment**
  - connectConnection and connectConnections queries can now return **source**, **destination**, **owner**, **lastRunStatus**, and **lastRunTime** fields for additional context on each connection.
  - connectRun and connectRuns queries can now return **sourceRowCount**, **sourceByteCount**, **destinationRowCount**, **destinationByteCount**, and **duration** fields to track data volume and performance metrics. This is available at an Experimental stability level.
- **Email Attachments**
  - The emailSend mutation now accepts optional attachments (up to 15 MB combined size). Supports BASE64 encoding for binary files and RAW encoding for plain UTF-8 text. This is available at an Experimental stability level.
- **Integrity Monitor** watchlist operations have been promoted to Stable

- Full On-Prem 2026H1 Release Notes: https://help.tanium.com/bundle/2025H1_releasenotes/page/modules.html#tanium_gateway

- On-Prem Maintenance Releases for Security and Bug Fixes: https://help.tanium.com/bundle/2026H1_releasenotes/page/maintenance.html

REST APIs

- **Tanium Threat Response**
  - Threat Navigator API is now available. Use it to run hypothesis-based hunts that use signal and IOC syntax and enable you to refine queries and save items of interest for future reference. Threat navigator enables you to search for artifacts on endpoints and test and develop intel across the following sources without creating alerts:
    - Historical data captured by recorder
    - File index data at rest
    - Live data from the recorder for any legitimate signal or IOC intel document

- Full On-Prem Release Notes: https://help.tanium.com/bundle/2024H2_releasenotes/page/modules.html#tanium_connect
- Full Tanium Cloud Release Notes: https://help.tanium.com/bundle/z-kb-articles-mediawiki/page/5330.html#Cloud_Release_Starting_on:_July_17,_2025

~ Changes and Fixes ~

- **BREAKING CHANGE –** The output of the **Recorder - Extension Settings** sensor incorrectly wraps numeric return values so they appear as b'<value>' in some environments. In a future release this will be corrected to return the numeric values only. Any saved usage of this sensor that you have in place, such as action targeting, may need to be updated to ensure that actions are targeted correctly when this output has been removed.
- **BREAKING CHANGE** – The output of the **Comply - Is Vulnerable** sensor has been changed from “NA” to “N/A” to align to Tanium standard formatting and improve results in Tanium Ask. Any saved usage of this sensor may need to be updated to reflect the new value.

Tanium Gateway GraphQL

- **BREAKING CHANGE** – The PlaybookStepOverride.stepId field returned from the playbookRun and playbookRuns queries has been deprecated and replaced with **PlaybookStepOverride.stepID**, matching the casing already used on **PlaybookStepOverrideInput**
- All CMDB legacy operations have been removed. The following queries and mutations are no longer available: configurationItemEntities, configurationItemRelationships, configurationItemProperties, relationshipTypes (queries) and deleteConfigurationItemElement,

deleteRelationship, importConfigurationItemEntities, mergeConfigurationItemElements, syncAssets, updateConfigurationItemProperties, upsertRelationship (mutations). These operations were deprecated in August 2024.

- **BREAKING CHANGE** – The **DiscoverInterface.cloudInstances** and **DiscoverInterface.cloudTags** fields that are returned by the discoverInterfaces and discoverInterface queries have been deprecated. These fields were temporarily removed for Tanium Cloud customers but will be restored and available for duration of the support period.

REST APIs

- **Deploy**
  - **BREAKING CHANGE** – Software packages are now limited to a maximum of 100 files. This impacts the following endpoints:
    - POST /v1/software-packages
    - PUT /v1/software-packages/{id}
    - PUT /v2/software-packages/{id}
    - PUT /v3/software-packages/{id}

- **Enforce**
  - Firewall v2 policies now enforce a 32 MB maximum log size and a minimum log size constraint. Validation code that sets log sizes may need to be updated to respect these limits. This impacts the following endpoints:
    - POST /api/v2/policies
    - PUT /api/v2/policies/{id}

~ Deprecation Notices ~

Sensors

- **Comply - Vulnerability CVE Search**: It is no longer being included in new customer environments and may be removed from all environments in a future release.

Connect

- Feature removal in **December 2026** for Tanium Cloud and **SAR2027H1** for the following:
  - Email (SMTP) destination

Module REST APIs

- Support will end for the following endpoints:
  - GET /plugin/products/asset/v1/settings/{name}

- PUT /plugin/products/asset/v1/settings/{name}
- POST /plugin/products/comply/v1/exports/:assessmentHash

Tanium Gateway GraphQL

- Support ends **June 2027** for the following fields:
  - object.PlaybookStepOverride.stepId
- Support ends **April 2027** for the following fields:
  - input.PlaybookStartInput.taskArgumentOverrides
  - input.PlaybookScheduleUpsertInput.taskArgumentOverrides
  - object.PlaybookSchedule.taskArgumentOverrides
  - object.PlaybookStepTaskArgumentOverride
  - query.playbookRuns.edges.node.steps.error
  - query.playbookRun.steps.error
  - query.playbookRuns.filter.isScheduled
- Support ends **March 2027** for the following fields:
  - query.playbookRun.steps.progress.details.actionID
  - query.playbookRuns.edges.node.steps.progress.details.actionID
- Support ends **February 2027** for the following fields:
  - object.PlaybookSchedule.nextRunTime
- Support ends **December 2026** for the following behaviors:
  - EndpointSourceTDS Input allowing namespaces and allNamespaces fields to be included together
- Support ends **December 2026** for the following fields:
  - query.playbookRun.steps.confirmationResult
  - query.playbookRun.steps.progress
  - query.playbookRuns.edges.node.steps.confirmationResult
  - query.playbookRuns.edges.node.steps.progress
- Support ends **November 2026** for the following fields:
  - mutation.playbookUpsert.playbook.canRun
  - mutation.playbookStart.playbookRun.playbook.canRun
  - query.playbookRuns.edges.node.canRun
  - query.playbooks.edges.node.canRun
  - query.playbookSchedules.edges.node.playbook.canRun
  - mutation.playbookStart.playbookRun.steps.playbookStep.currentUserMissingPermissions
  - mutation.playbookUpsert.playbook.runs.edges.node.steps.playbookStep.currentUserMissingPermissions
  - query.playbookRuns.edges.node.steps.currentUserMissingPermissions
  - query.playbooks.edges.node.steps.currentUserMissingPermissions
  - query.playbookSchedules.edges.node.playbook.steps.currentUserMissingPermissions
- Support ends **June 2026** for the following fields:

    - mutation.assetsImport
- Tanium Gateway APIs Deprecation Reference: https://help.tanium.com/bundle/ug_gateway_cloud/page/gateway/deprecated.html
- Tanium Gateway Stability Index Changes: https://help.tanium.com/bundle/ug_gateway_cloud/page/gateway/stability_index.html
